Yann Crenn

Full-Stack Web Developer
Encinitas, CA 92024
yanncrenn.softwareengineering@gmail.com
+1 619 366 7343

Professional Summary

I’m a full-stack engineer who ships clean, dependable products. Frontend: React, TypeScript, JavaScript. Backend: Node and Python (also worked with PHP/Hack). I design clear, idempotent REST APIs, ship with Docker/CI, and care about performance.

Authorized to work in the US for any employer

Work Experience

Software Engineer

Meta Via Sigma Connectivity-San Diego, CA
July 2024 to Present

• Security & privacy: Strengthened access controls, encryption, and data-retention practices across core systems; partnered with platform and data teams to make secure-by-default the norm.

• Reliability & operations: Improved logs/metrics and alerting, led on-call incident response with clear runbooks, and reduced time to detect and recover production issues.

• Product quality: Diagnosed and resolved user-facing issues across critical messaging flows, delivering end-to-end fixes across web/mobile frontends and backend services.

• Developer velocity: Stabilized CI/CD and data pipelines, simplified schemas/code generation, and documented workflows and handoffs to keep builds green and teams unblocked.

Software Engineer / AI Trainer

Outlier-Encinitas, CA
April 2023 to July 2024

• Prompt design & iteration: Wrote and refined prompts, task instructions, and a few-shot examples across multiple projects to improve answer quality and consistency.

• Response evaluation: Reviewed model outputs against clear guidelines, recorded scores/rationales, and surfaced recurring failure patterns and edge cases.

• Rubric & calibration: Suggested clarifications to evaluation rubrics and participated in calibration sessions to improve inter-rater agreement.

• Safety & policy checks: Ran targeted tests for PII, harmful content, and bias; flagged risks and proposed safer wording or refusal patterns.

Software Engineer

Promenade-Los Angeles, CA
March 2022 to April 2023

• Shipped React/TypeScript features and GraphQL/REST endpoints; improved storefront conversion and time-to-interactive via code-splitting and API tuning.

• Introduced Cypress integration tests and GitHub Actions gating → fewer post-release defects.

• Partnered with Design on UX improvements; instrumented analytics to iterate quickly from real feedback.

• Containerized services with Docker and strengthened CI/CD; collaborated on cloud deployment to improve release reliability.

Software Engineer

Ripe Metrics-San Diego, CA

September 2021 to March 2022

• Created multiple pages and reusable components from scratch, leading the migration of the app from PHP to React.

• Designed schemas and built event-driven notifications; added WebSockets for live updates.

• Reduced query latency via indexing/caching; added an OpenAPI spec to speed partner integration.

• Created GitHub Actions CI for automated tests/builds; improved release reliability and developer velocity.

Education

Coursework: Algorithms, Distributed Systems, Databases

Full Stack Web Development Bootcamp

Learn Academy Coding Bootcamp-San Diego, CA

April 2020 to August 2021

Business (Bachelor's Degree)

Collège Le Likès - Quimper, France

September 2007 to July 2011

Skills

- Backend: Node.js, Python (FastAPI), Express, REST (idempotency/pagination/versioning), WebSockets, OpenAPI
- Cloud/DevOps: AWS , GitHub (Actions)
- AI/ML Integration: OpenAI API, Supabase Edge Functions, model evaluation workflows
- Frontend: React, React Router, Next.js, TypeScript, React Native, GraphQL
- Quality/Obs: Jest, Cypress
- Data/Messaging: Postgres, MySQL, MongoDB, Redis; schema design, caching, indexing;

Additional Information

Projects:

• StoryTailor — React Native + Expo + Supabase + OpenAI. AI-generated bedtime stories with create-your-own flow, offline library, favorites, voice narration, and basic analytics.

• LLM Evaluation Tool — Python dashboard comparing prompt/response variants across models; streamlined review workflow and improved team velocity by ~25%.

• Portfolio Web Apps — Food, Cocktail, Movie, and Shopping Cart projects showcasing React/TypeScript, routing & state management, API integration, search/filtering, and responsive UI.

• FastAPI BFF Microservice — FastAPI service exposing /orders (idempotent POST), /orders/{id}, pagination & versioning; OpenAPI, Docker, k6 load test, GitHub Actions CI.

• DataHub Lineage Quickstart — Ingested Postgres + dbt sample into DataHub locally; explored ownership & lineage, tagged PII, and added basic glossary terms.
